or other formats The code I'm using is import epub mf = epub.metadata.MetadataFile('myfile.epub') metadata = mf.metadata I've had some trouble and tried to look at the page that the error is happening from, but it was in Chinese. It seems this issue happens when there is a meta tag with the wrong count of parameters. Does anyone know how to fix this? A: The Epub toolchain only understands the format described in section 3.1 of the standard, and does not support the new format with its extra meta-tag "ParamCount". You must upgrade to the newest version of EpubLib (1.6) or look for a toolchain that does support it (see comments at the bottom of this page). { "version": "1.0.0.7", "description": "Avery Clock", "homepage": "", "license": "MIT", "url": "", "hash": "d737ba0f4c9f26cd0e5043c0cf633ee741b3c8d77e61f26b8ef01c1a5901f512", "extract_dir": "AveryClock", "bin": "AveryClock.exe", "shortcuts": [["AveryClock.exe", "AveryClock"]], "checkver": "github", "autoupdate": { "architecture": { "64bit": { "url": " 82157476af
